

## Fury Intercepts 5.73 g/t gold and 11.27g/t Tellurium over 3.5 Metres at the Hinge Target

VANCOUVER, Canada – October 3, 2023 – Fury Gold Mines Limited (TSX and NYSE American: FURY) (“Fury” or the “Company” - <https://www.commodity-tv.com/ondemand/companies/profil/fury-gold-mines-ltd/>) is pleased to provide results for an additional two infill core drill holes from the Hinge Target at the high-grade Eau Claire gold project located in the Eeyou Istchee Territory in the James Bay region of Quebec. The 2023 drill program continues to focus on infill drilling at the Hinge Target located immediately west of the Eau Claire Deposit. Every hole completed at the Hinge Target to date has intercepted two corridors of stacked gold-bearing quartz tourmaline veins and alteration including 3.5 metres (m) of 5.73 g/t gold and 11.27 g/t Tellurium and 7.43g/t gold over 2.5m within a broader interval of 4.65g/t gold and 8.72 g/t Tellurium over 4.5m (Table 1; Figure 1). These results continue to highlight the importance of the Hinge Target to the overall expansion of the Eau Claire Deposit to the west.

Drill holes 23EC-065 and 23EC-068 represent the continuation of a series of infill drill holes designed to tighten up the spacing of the 2022 Hinge Target drilling to a nominal spacing of 60-80m. The stacked intercepts through these new holes continue to exhibit the overall strength of the mineralized system within the Hinge Target. These results provide confidence in the continuity of the modeled sub-vertical veining at the Hinge Target. In addition to gold, the Eau Claire Deposit is rich in Tellurium, a mineral present on the list of critical and strategic elements. Tellurium can be used in the manufacturing of stainless steel, batteries and solar panels.

“We are pleased to be back reporting results after experiencing longer than usual wait times with the assay labs. These assays come on the back of what we believe were two strong conferences for Fury at Precious Metals Beaver Creek and Gold Forum Americas,” commented Tim Clark, CEO of Fury. “As a result, we remain confident that Fury is one of the best-positioned companies in the junior exploration sector with our significant cash, Dolly Varden Silver equity stake, and optionality for upside both at the discovery level and resource development.”

Table 1: Eau Claire Drill Results

Hole ID	From	To	Length (m)	Au (g/t)	Te (g/t)
23EC-065	398.5	399.5	1.00	3.00	3.57
	452	454	2.00	1.47	2.37

	408	415.5	7.50	1.32	2.33
	<b>435</b>	<b>442.5</b>	<b>7.50</b>	<b>2.56</b>	<b>3.58</b>
Incl.	441	442.5	1.50	4.83	
	445.5	451.5	6.00	1.20	1.30

Main intervals - Au grade\*thickness no less than 2 g/t\*m with grade is no less than 1 g/t, maximum consecutive dilution 2m  
Sub-intervals - Au grade\*thickness no less than 7 g/t\*m with grade is no less than 3.5 g/t, maximum consecutive dilution 2m  
Downhole thickness was used due to the unknown zone orientations

## Western Hinge Target

The 2023 exploration program at the Hinge Target focuses on tightening the drill spacing to 60-80m to demonstrate confidence in the continuity of the mineralized vein corridors identified to date. The Hinge Target is defined by two 100m wide corridors of mineralization each hosting multiple sub-vertical quartz tourmaline veins (Figure 2). To date, nineteen discrete veins have been modeled within the two corridors and remain open in all directions.

“The results from the 2023 drill holes received to date demonstrate a remarkable continuity to the gold-bearing veins within the Hinge Target. We are intersecting the veins within a meter or two of where we have modeled them from the wide-spaced 2022 drilling which gives our team a lot of confidence moving forward with the current drill program. We have been active throughout the property package in 2023 and we are eagerly anticipating the first round of results from the follow-up drilling at Percival and the exploration work out along the Cannard Deformation Zone,” stated Bryan Atkinson, SVP, Exploration of Fury.

### Sampling and Assaying Disclosure

Analytical samples for the Drill Program were taken by sawing HQ diameter core into equal halves on site with one half sent to ALS Chemex in Val D'or, Quebec, Canada for preparation and analysis. All samples were assayed using a 50 g nominal weight fire assay with inductively coupled plasma – atomic emission spectrometry finish (Au-ICP22) and multi-element four acid digest ICP-AES/ICP-MS method (ME-MS61). Where Au-ICP22 results were greater than 0.5 ppm Au the assay was repeated with a 50 g nominal weight fire assay with atomic absorption finish (Au-AA24). Samples containing more than 10 ppm by Au-AA24 were re-assayed with 50 g nominal weight fire assay with gravimetric finish (Au-GRA22). QA/QC programs using internal standard samples, field and lab duplicates and blanks indicate good overall accuracy and precision.

David Rivard, P.Geo, Exploration Manager at Fury, is a "qualified person" within the meaning of Canadian mineral projects disclosure standards instrument 43-101 and has reviewed and approved the technical disclosures in this press release.

## **About Fury Gold Mines Limited**

Fury Gold Mines Limited is a well-financed Canadian-focused exploration company positioned in two prolific mining regions across Canada and holds a 59.5 million common share position in Dolly Varden Silver Corp (23.4%). Led by a management team and board of directors with proven success in financing and advancing exploration assets, Fury intends to grow its multi-million-ounce gold platform through rigorous project evaluation and exploration excellence. Fury is committed to upholding the highest industry standards for corporate governance, environmental stewardship, community engagement and sustainable mining. For more information on Fury Gold Mines, visit [www.furygoldmines.com](http://www.furygoldmines.com).

### **Forward-Looking Statements and Additional Cautionary Language**

This release includes certain statements that may be deemed to be "forward-looking statements" within the meaning of applicable securities laws, which statements relate to the future exploration operations of the Company and may include other statements that are not historical facts. Forward-looking statements contained in this release primarily relate to statements that suggest that future work at the Hinge or Eau Claire areas will increase or upgrade the estimated gold resources.

Although the Company believes that the assumptions and expectations reflected in those forward-looking statements were reasonable at the time such statements were made, there can be no certainty that such assumptions and expectations will prove to be materially correct. Mineral exploration is a high-risk enterprise.

Readers should refer to the risks discussed in the Company's Annual Information Form and MD&A for the year ended December 31, 2022 and subsequent continuous disclosure filings with the Canadian Securities Administrators available at [www.sedar.com](http://www.sedar.com) and the Company's Annual Report available at [www.sec.gov](http://www.sec.gov). Readers should not place heavy reliance on forward-looking information, which is inherently uncertain.
